N; Contains: amino end of envelope protein M; carboxyl end of capsid protein C

C; Species: hepatitis C virus

A; Note: host Homo sapiens (man)

C; Date: 09-Oct-1992 #sequence_revision 09-Oct-1992 #text_change 09-Jul-2004

C; Accession: PSUGA

R; Fuchs, K:; Mutz, M.; Schreier, E.; Zachoval, R.; Deinhardt, F.; Roggendorf, M.

Gane 103, 163-169, 1991

A; Title: Characterization of nucleotide sequences from European hepatitis C virus isolat

A; Reference number: JNU265; MUID:91365241; PMID:1653756

A; Accession: PSUGA

A; Reference number: NNA

Genome polyprotein - hepatitis C virus (strain U.K.) (fragment)
NyContains: core protein C; envelope protein E1; envelope protein E2; nonstructural pr C;Species: hepatitis C virus
C;Species: hepatitis C virus
C;Date: 17-Apr-1993 #sequence_revision 17-Apr-1993 #text_change 09-Jul-2004
C;Accession: JQ1584
R;Kumar, U.; Cheng, D.; Thomas, H.; Monjardino, J.
J, Gen. Virol. 73, 1521-1525, 1992
A;Title: Cloning and sequencing of the structural region and expression of putative co
A;Reference number: JQ1584; MUID:92300349; PMID:1318944
                                                                                                                                                             A; Accession: JH0711
A; Molecule type: genomic RNA
A; Mesidues: 1-550 < LIU>

N;Contains: core protein; envelope protein 1; nonstructural protein 2; NS1/E2 protein
C;Species: hepatitis C virus
A;Variety: isolate JK4
C;Date: 30-Unn-1992 #sequence_revision 30-Unn-1992 #text_change 09-Jul-2004
C;Accession: S18032
R;Honda, M.; Kaneko, S.; Masashi, U.; Kobayashi, K.; Murakami, S.
Submitted to the EMBL Data Library, September 1991
A;Pescription: Sequence analysis of putative structural regions of Hepatitis C Virus:
A;Reference number: S18029

polypeptide - hepatitis C virus (type 5a) (fragments)
N;Contains: core protein; E1 (carboxyl end); E2/NS1 (amino end); NS3 protein; NS4A pro C;Species: hepatitis C virus
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 31-Dec-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           genome polyprotein - hepatitis C virus (isolate JK2) (fragment)

C. Specials: hepatitis C virus
N. Contains: core protein; envelope protein 1; nonstructural protein 2; NS1/E2 protein
C. Specias: hepatitis C virus
A; Variety: isolate JK2
C; Date: 30-Jun-1992 #sequence_revision 30-Jun-1992 #text_change 09-Jul-2004
C; Accession: 518031
R; Honda, M.; Kaneko, S.; Masashi, U.; Kobayashi, K.; Murakami, S.
submitted to the EMBL Data Library, September 1991
A; Description: Sequence analysis of putative structural regions of Hepatitis C Virus isc
A; Reference number: Sl8031
A; Molecule type: genomic RNA
A; Reference number: isolate JK2
A; Molecule type: genomic RNA
A; Residues: 1-782 +HON3
A; Residues: 1-782 +HON3
A; Residues: 1-782 +HON3
A; Residues: 1-782 HON3
C; Superfamily: hepatitis C virus genome polyprotein
C; Keywords: care protein; core protein; envelope protein; glycoprotein; nonstructural

betains aldehyde dehydrogenase homolog T24C20.50 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 13-Aug-1999 #sequence_revision 13-Aug-1999 #text_change 09-Jul-2004
C;Accession: T13006
R;Choisne, N.; Robert, C.; Brottier, P.; Wincker, P.; Cattolico, L.; Artiguenave, F.; is submitted to the Protein Sequence Database, July 1999
A;Reference number: Z17586
A;Accession: T13006
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-503 < CHO>

A,Title: The S'-terminal sequence of the hepatitis C virus genome.
A,Reference number: PC1284; MUID: 91013116; PMID: 2170712
     genome polyprotein - hepatitis C virus (strain H)
N;Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstructu
protein NS4s; nonstructural protein NS4b; nonstructural protein NS5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      F;1616-1862/Product: nonstructural protein NS4a #status predicted <N4A>

Drecorrin-3 methylase (BC 2.1.1.-) - Rhodobacter capsulatus
C.Species: Rhodobacter capsulatus
C.Species: Rhodobacter capsulatus
C.Species: Rhodobacter capsulatus
C.Species: Ra-1999 #sequence_revision 24-Mar-1999 #text_change 09-Jul-2004
C.Accession: T03534
R.Vicek, C.; Paces, V.; Maltsev, N.; Paces, J.; Haselkorn, R.; Fonstein, M.
Proc. Natl. Acad. Sci. U.S.A. 94, 9384-9388, 1997
A.Title: Sequence of a 189-kb segment of the chromosome of Rhodobacter capsulatus SB1003
A.Reference number: Z14955; MUID:97404404; PMID:9256491
A.Accession: T03534
A.Status: preliminary; translated from GB/EMBL/DDBJ

Publication No. US20030064360A1
GENERAL INFORMATION:

TILE OF INVENTION: New sequences of hepatitis C virus
genotypes for diagnosis, prophylaxis and therapy.
                                                                                                                                                                                                                 TITLE OF INVENTION: New sequences of hepatitis C virus
